Introduction

Involved with One Touch Switch (OTS) from the start, Zentive are an official Managed Access Provider (MAP) for The One Touch Switching Company (TOTSCo). Using our extensive knowledge of the OTS process we developed our SureSwitch solution with maximum flexibility for use by any Communication Provider or Reseller regardless of size or existing infrastructure.

Our SureSwitch Portal can be used to manage gaining switch orders, from matching to activation, communicating seamlessly with the TOTSCo Hub on your behalf. SureSwitch users can submit and manage Gaining Switches and can track the status of gaining and losing switch cases at any stage of the Switching process.

System Overview

Account Registration

All Communication Providers signing up to use SureSwitch will have their account created by Zentive with a main administrator user account. The account creation will trigger a Welcome email to your admin user so that registration can be completed, and the Portal accessed.

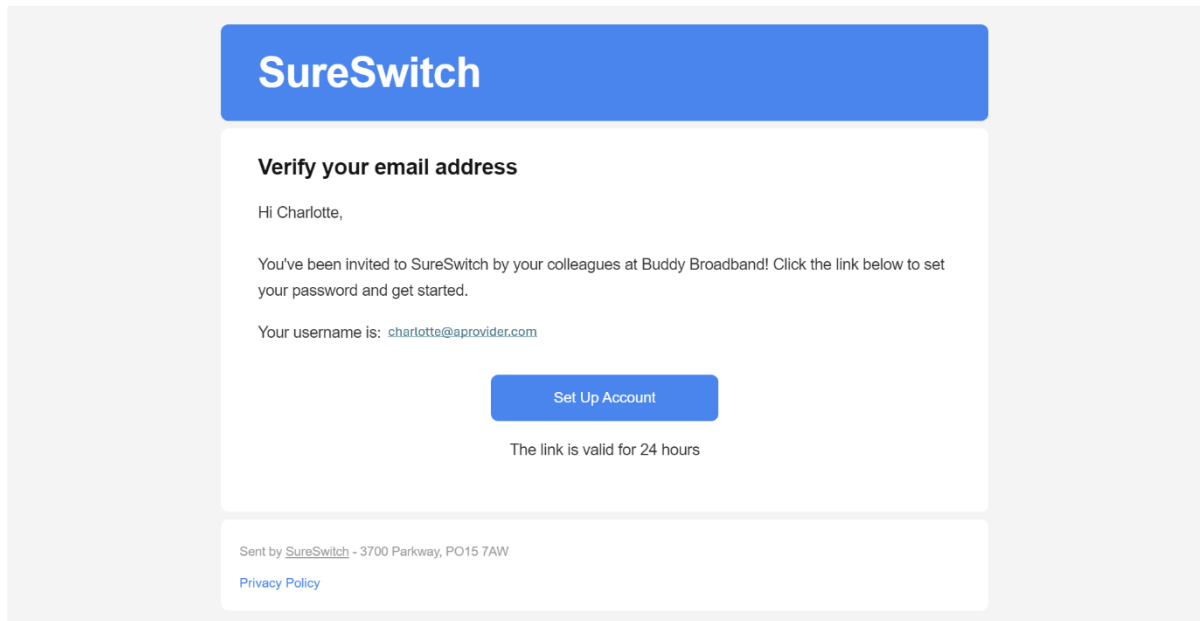

Example Welcome Email

Welcome to SureSwitch

noreply@zentive.com
to charlotte@aprovider.com

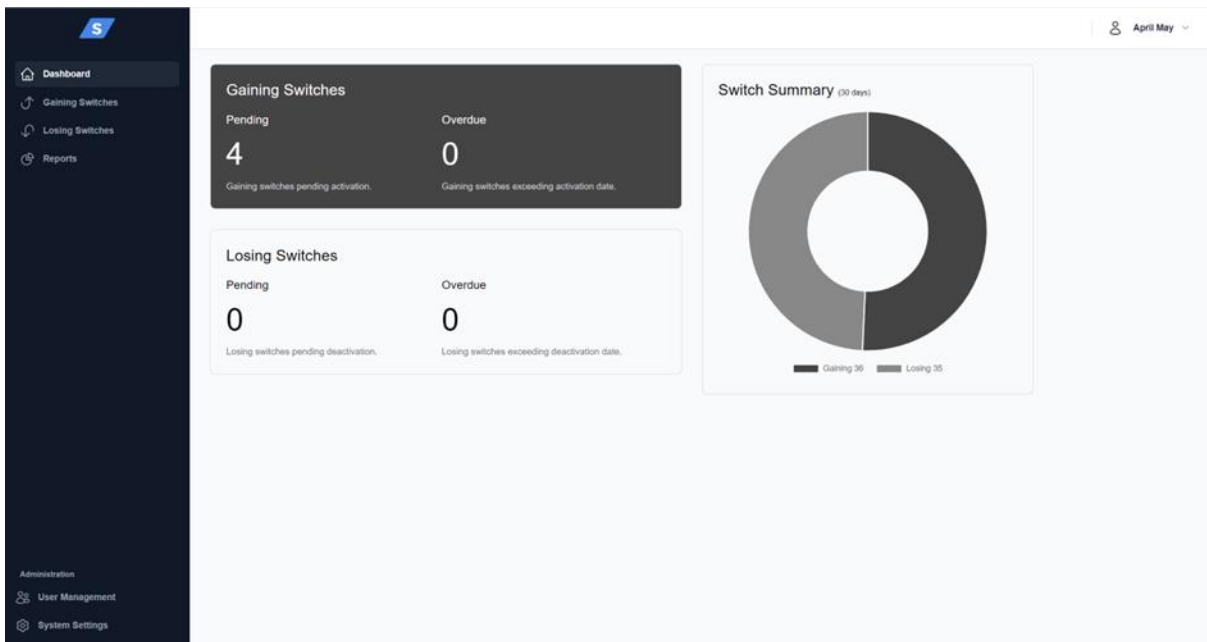

2:13PM (3 minutes ago) ☆ 😊 ← ⋮

On receipt of the Welcome email, clicking Set Up Account will navigate to the Register User screen, where you can create, confirm, and set your password. From here your user account is complete and you will be navigated to the SureSwitch Portal Dashboard.

User Dashboard

The Dashboard gives an overview of the switches in progress with the provider for both gaining and losing switches, and a count of pending and overdue cases that need attention.

Gaining Switches

The SureSwitch Portal allows you to manage your gaining switch cases throughout the entire process to completion.

Selecting the Gaining Switches menu option displays a list of gaining switch cases currently in your system, showing a summary of information including status, planned switch date, and losing provider. If the account has multiple registered brands, the Gaining Switches view will include a filter for Gaining provider and will also include the Gaining Provider in the table.

Gaining switches that have not been updated within the last 60 days will be marked as abandoned. These switches can be displayed by checking the Show abandoned checkbox.

The screenshot shows the 'Gaining Switches' page with a sidebar on the left containing navigation options: Dashboard, Gaining Switches (selected), Losing Switches, Reports, Administration, User Management, and System Settings. The main content area has a 'Gaining Switches' title, a 'Create New' button, and search filters for 'Generated/Switch order reference', 'Switch status', 'Losing provider', and a 'Show abandoned' checkbox. Below these is a table with the following data:

Created Date	Generated Reference	Status	Ordered Switch Order Reference	Planned Switch Date	Losing Provider
9th Sep 2024 at 09:38	ZEN-G-0134	Match failed			Zentive-Test

9th Sep 2024 at 04:49	ZEN-G-0123	Match failed			Zentive-Test

Stages of the Gaining Switch process:

Switch Stage	Description
Matching	Customer and their existing service details are collected and sent to the losing provider to match with their subscriber data.
Matched	Losing provider makes a match and returns switching options for the customer to select
Ordered	Customer selects the required switch action and places the order to proceed with switching their services
Updated	Successful orders can be updated with new planned switch dates if required
Triggered	Successful orders are triggered when the gaining provider activates the service. This is a notice to the losing provider to cease services and billing
Cancelled	Successful orders can be cancelled at any stage prior to being triggered

Create a Gaining Switch Case

On the Gaining Switches screen select Create New to display the New Gaining Switch screen. The details on this screen are used for matching the customer with data held by the losing provider. The mandatory fields are indicated with an asterisk, all other details are optional.

The Our reference value is any id that may refer to the customer in your BSS, allowing you to create a link between a customer and a switch case.

As most customers will not be aware of their address Unique Property Reference Number (UPRN), their address can also be found by searching on postcode. If the address provided by the customer is not found, or any provided UPRN does not match, then the switch cannot continue via the SureSwitch Portal.

The customer's existing provider should be selected from the Losing Provider dropdown, this is a list of all Providers registered with the TOTSCo Hub. If the customer's provider is not listed, the switch cannot continue via the SureSwitch Portal, and the customer must contact their losing provider directly.

At least one service must be added to attempt a match. To add a service click Add +, enter the broadband or telephony details and select the action that is required. For broadband, you can only cease service from the losing provider, for telephony, porting should be used if the customer wishes to keep their telephone number. Identify can also be used to assist with match requests where the phone service exists but will not be included in the switch. Once the details are complete, click Add Service and repeat the process for all known services that are required to be actioned by the switch.

When using the SureSwitch Portal for switching, the customer must consent to their existing provider contacting them with the implications of their required switch. If the customer does not consent, the switch cannot proceed via the SureSwitch Portal.

Once all the details are complete, clicking Submit Request will start the matching process.

Match Consent

Does the customer consent to their current provider sending leaving implications?

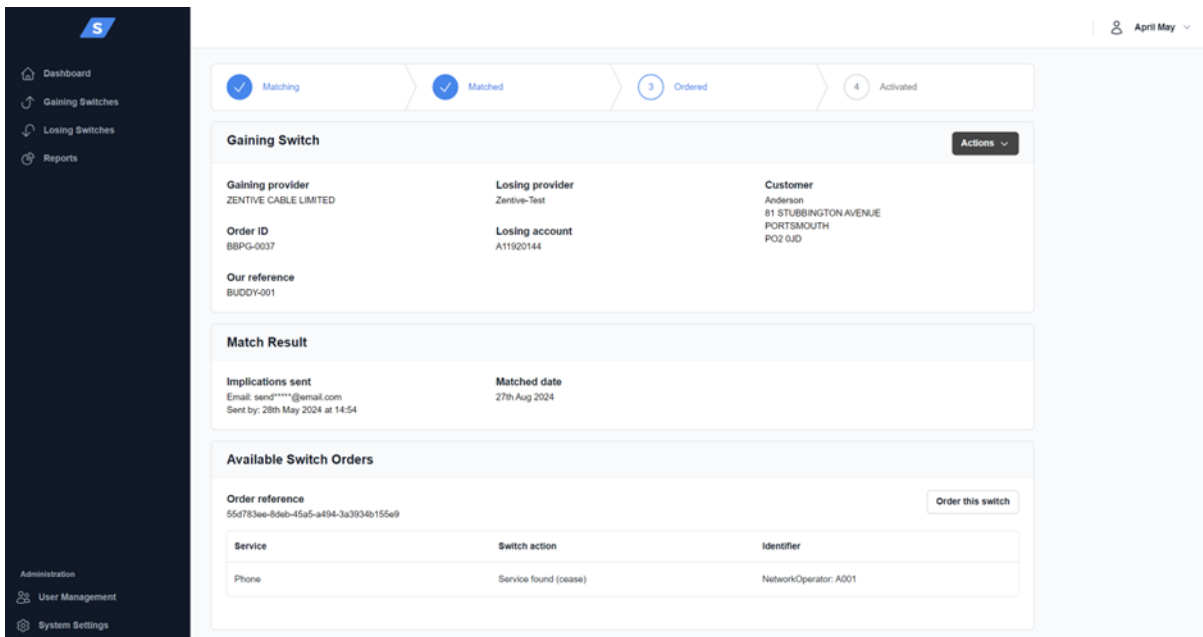

Consent given

Cancel Submit Request

If the matching process fails, the details provided can be amended and the match request resubmitted.

Matched Gaining Switch Case

On receipt of a successful match the switch case will move to the matched step of the process.

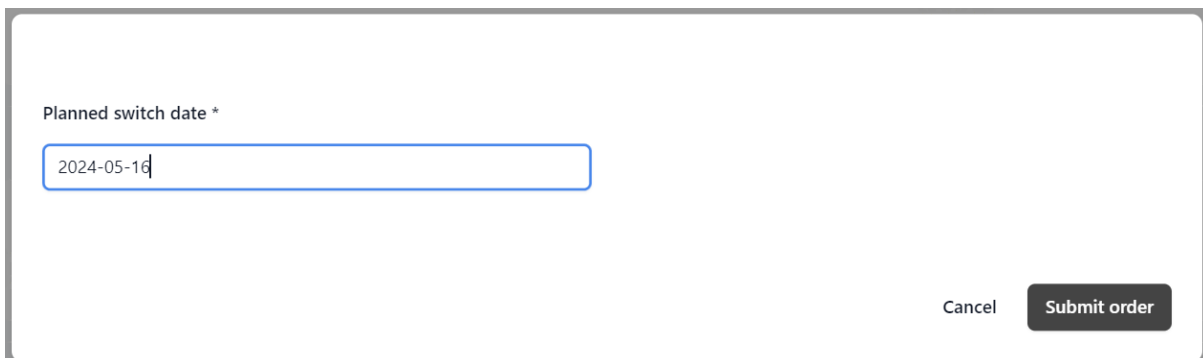

The Match Result section shows the matched date, and information about how and when implications of switching were sent to the customer by their existing provider.

The Available Switch Orders section shows the switch options given by the losing provider, generally this will be a single option, matching the customer request. However, it is possible for the losing provider to also provide alternative options. For example, if a customer requested to cease their broadband and retain their telephony service, the alternative option could be to cease both services.

Once successfully matched, a switch case can be ordered.

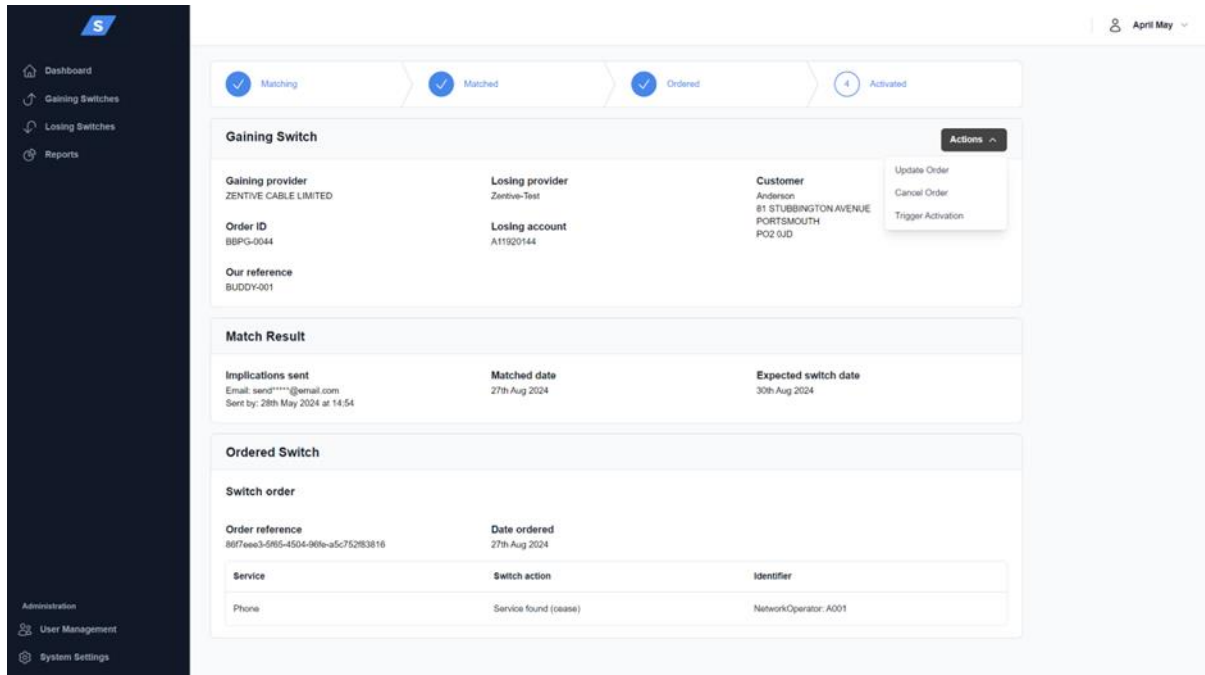

Ordering a Gaining Switch Case

Ordering a switch case via the SureSwitch Portal is very simple, just click Order this switch, for the required switch option. This displays a date field for the planned switch date to be selected.

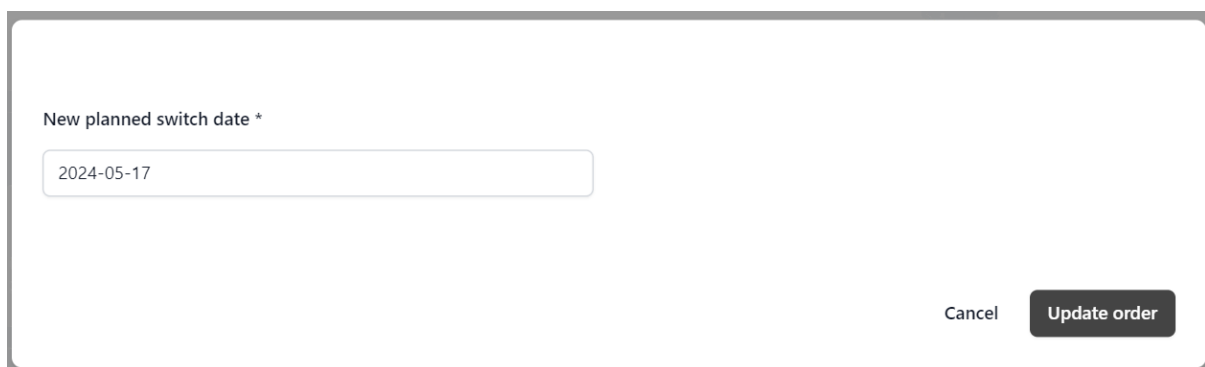

Select the required switch date and click Submit order. If for any reason, the order process fails, it can be reordered by selecting the Reorder option from the Actions menu.

When a successful response is received the selected switch option is now displayed as ordered, with the date, and the expected switch date. From this stage in the process the switch can be updated, activated, or cancelled.

Updating a Gaining Switch Case

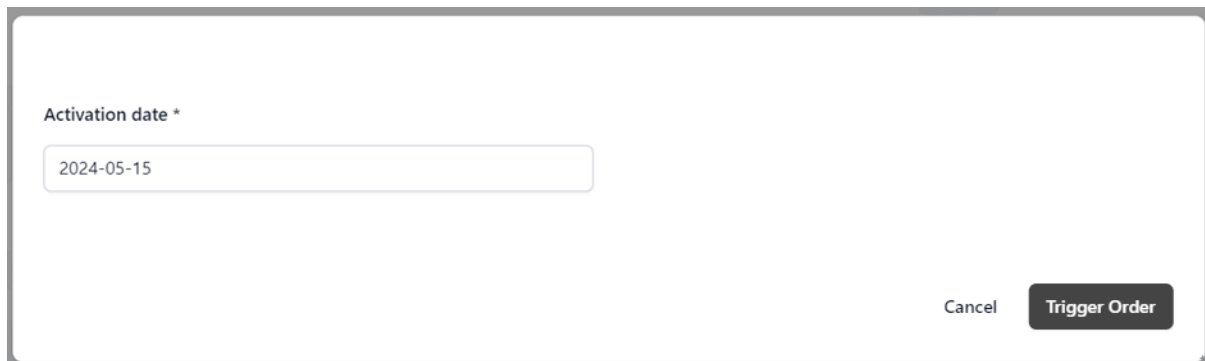

An ordered switch case can have the planned switch date updated by selecting Update order from the Actions menu. Then simply enter the new planned switch date and click Update order. Ordered switch cases can be updated as many times as necessary before a trigger disconnection request is sent to the losing provider.

Triggering a Gaining Switch Case

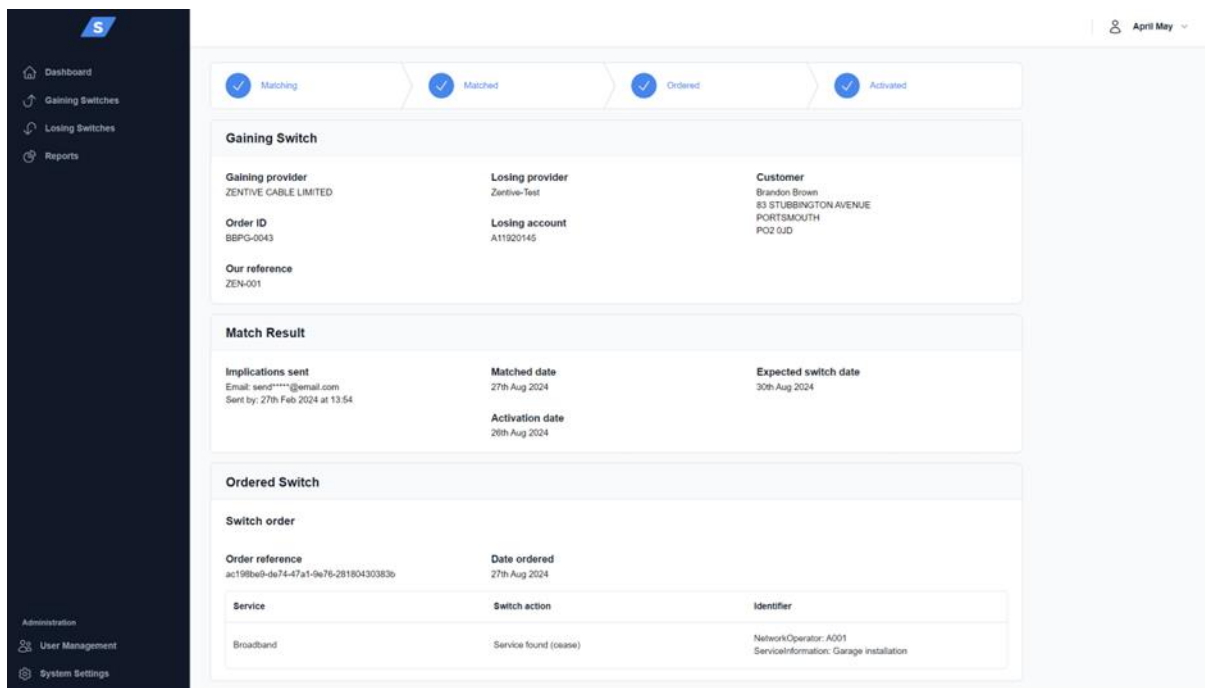

When a switch has been completed, a trigger order is sent to the losing provider instructing them to cease services and billing. When the trigger is ordered, the activation date is set confirming the date that the gaining provider completed the switch process.

To set the activation date, select Trigger Activation from the Actions menu, enter the date the switch was completed and click Trigger Order.

The screenshot shows a dialog box for triggering a switch. It features a label "Activation date *" above a text input field containing the date "2024-05-15". At the bottom right, there are two buttons: "Cancel" and "Trigger Order".

If the trigger activation fails it can be re-triggered by again selecting Trigger Activation from the Actions menu. Once a successful trigger response is received the process is complete and the activation date is displayed against the switch order.

The screenshot displays a web interface for managing switch orders. On the left is a dark sidebar with navigation links: Dashboard, Gaining Switches, Losing Switches, Reports, Administration, User Management, and System Settings. The main content area shows a progress bar with four stages: Matching, Matched, Ordered, and Activated, each with a checkmark. Below the progress bar are three sections:

- Gaining Switch**

Gaining provider ZENTIVE CABLE LIMITED	Losing provider Zenite-Test	Customer Brandon Brown 83 STUBBINGTON AVENUE PORTSMOUTH PO2 0UD
Order ID BBPG-0043	Losing account A11920145	
Our reference ZEN-001		
- Match Result**

Implications sent Email: send*****@email.com Sent by: 27th Feb 2024 at 13:54	Matched date 27th Aug 2024	Expected switch date 30th Aug 2024
	Activation date 28th Aug 2024	
- Ordered Switch**

Switch order		
Order reference ac198be9-9a74-47a1-9a76-28180430383b	Date ordered 27th Aug 2024	
Service Broadband	Switch action Service found (issue)	Identifier NetworkOperator: A001 ServiceInformation: Garage installation

Once a Trigger Activation request has been confirmed by the losing provider, the switch can no longer be updated or cancelled.

Canceling a Gaining Switch Case

Switch cases that have been ordered or updated, and not yet triggered, can be cancelled by selecting Cancel Order from the Actions menu. When the cancel option is selected it must be confirmed to ensure that cancellation is required. Confirming the cancellation notifies the losing provider that the switch should no longer be processed.

When a cancellation confirmation response has been received, the switch can no longer proceed.

Losing Switches

The SureSwitch Portal allows you to view your losing switch cases throughout the process to their completion.

Selecting the Losing Switches menu option displays a list of losing switch cases currently in your system, showing a summary of information including status, planned switch date, and gaining provider. Losing switches that have not been updated within the last 60 days will be marked as abandoned. These switches can be displayed by checking the Show abandoned checkbox.

If the account has multiple registered brands, the Losing Switches view will include a filter for Losing provider and will also include the Losing Provider in the table. Full switch case details can be viewed from here.

The screenshot displays the 'Losing Switches' interface. At the top, there are filters for 'Generated/Switch order reference', 'Switch status', 'Gaining provider', and a 'Show abandoned' checkbox. The main table lists the following data:

Created Date	Generated Reference	Status	Ordered Switch Order Reference	Planned Switch Date	Gaining Provider

5th Sep 2024 at 13:46	ZEN-L-0738	Match failed			ZENTIVE CABLE LIMITED

Selecting any losing switch case and selecting View displays more details.

Example of a triggered switch case:

The screenshot displays a web application interface for managing switch cases. On the left is a dark navigation menu with icons and labels for Dashboard, Gaining Switches, Losing Switches, Reports, Administration, User Management, and System Settings. The main content area features a progress bar at the top with four steps: Matching, Matched, Ordered, and Activated, each with a blue checkmark. Below the progress bar, the details for a 'Losing Switch' are shown, including the provider name (Zenfive-Test), order ID (GCPL-0034), and account number (A11920144). The 'Match Result' section provides the date the match was made (27th Aug 2024) and the expected switch date (30th Aug 2024). The 'Ordered Switch' section shows the order reference (g37cd5e3-4c90-4812-8238-631471108b2e) and the date it was ordered (27th Aug 2024). A table below lists the service details, showing a 'Phone' service with the action 'Service found (cease)' and the identifier 'NetworkOperator: A001 PartialDN: 00'.

Reports

Selecting Reports from the menu display the reports available to be run against the gaining and losing switch cases associated with the provider account.

Gaining Switches Report

The Gaining Switches Report is simply generated by clicking Generate Report. With the default filters applied this will return all gaining switches for the past month. The results can be filtered by date period up to a maximum of one year, switch status, and gaining and losing provider. Checking the Show abandoned checkbox will also include abandoned switches. Each row in the results can be selected to view the switch details, and all results can be exported to Excel.

User Management

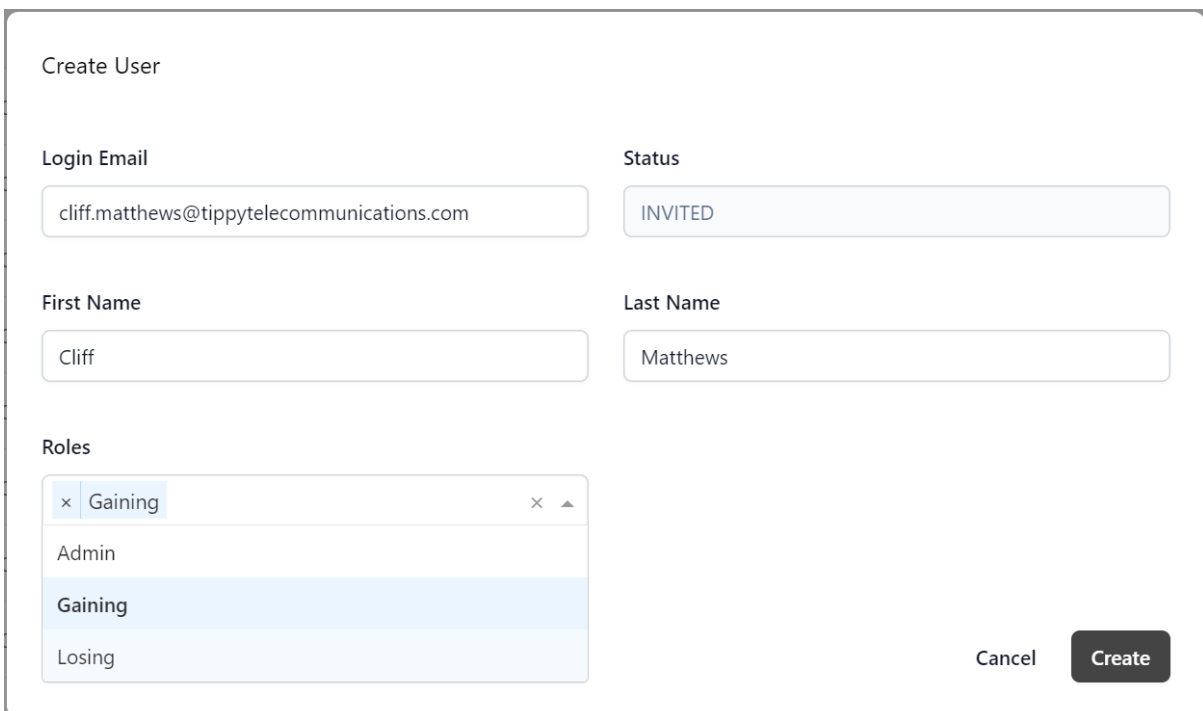

The User Management screen is accessible if your profile has an admin role.

Create a User

As an Administrator, you can invite as many users to the SureSwitch Portal as required, those users just need an email address to receive the invitation and complete their account setup.

To create a new user, click Create New, all the fields are mandatory so enter the login email address, user first and last names and select the required roles.

Clicking Create commits the details to the account and sends an invitation to the user's login email address.

On receipt of the Welcome email, the new user should continue to set up their account. Clicking Set Up Account will navigate them to the Register User screen, where they can create, confirm, and set their password.

Users with a status of Invited cannot login to the SureSwitch Portal until they have completed their account set up. The invitation expires after 24 hours. Administrators can resend an invitation to a user's login email address should the invitation expire, or the initial email be lost, replacing the previous invitation.

Edit a User

As an Administrator, you can edit existing user details. From the User Management screen, select edit and the Edit User screen is displayed.

Example edit user screen with all possible available options.

Edit User

Login Email
petra.james@tippytelecommunications.com

Status

Re-send Invitation Enable Login Reset Password Disable Login Delete User Cancel **Update**

Login Email, First and Last names, and Roles can be modified, and changes confirmed by selecting Update.

For active users, you can choose to reset a password which will trigger an email to the user's login email address. The login can also be disabled to temporarily prevent the user from accessing the Portal or deleted to permanently remove the user from the account.

Users with a login status of disabled can be re-enabled, allowing access to the Portal to be restored, or the user can be deleted.

User Roles

There are two types of users in the SureSwitch Portal, admin and non admin users and this is defined by the roles they are given. There are three roles available, admin, gaining and losing.

Admin Role

This gives you access to everything, User Management, System Settings, Reports and both the Gaining and Losing Switches.

Gaining Role

This allows you to create, manage and view gaining switch cases.

Losing Role

This allows you to view losing switch cases.

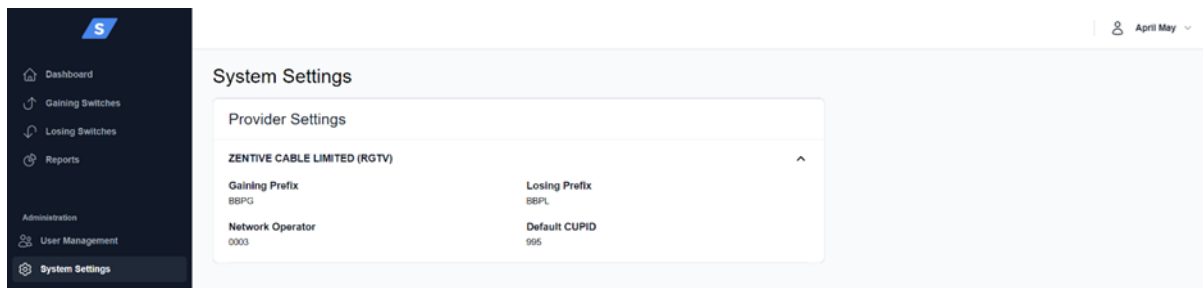

Change Password

Regardless of roles, all users can change their password, by selecting their name and then Change Password on menu bar. Simply enter your current password, a new password that meets the criteria, confirm the password and click Submit.

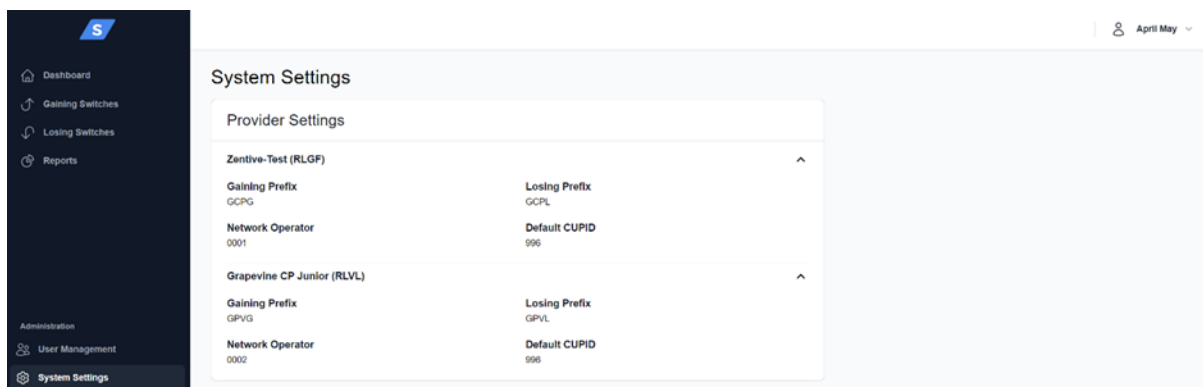

System Settings

The System Settings are only accessible if you have the administrator role. This will display Provider, Customer Matching, Switching Events and Switching API settings.

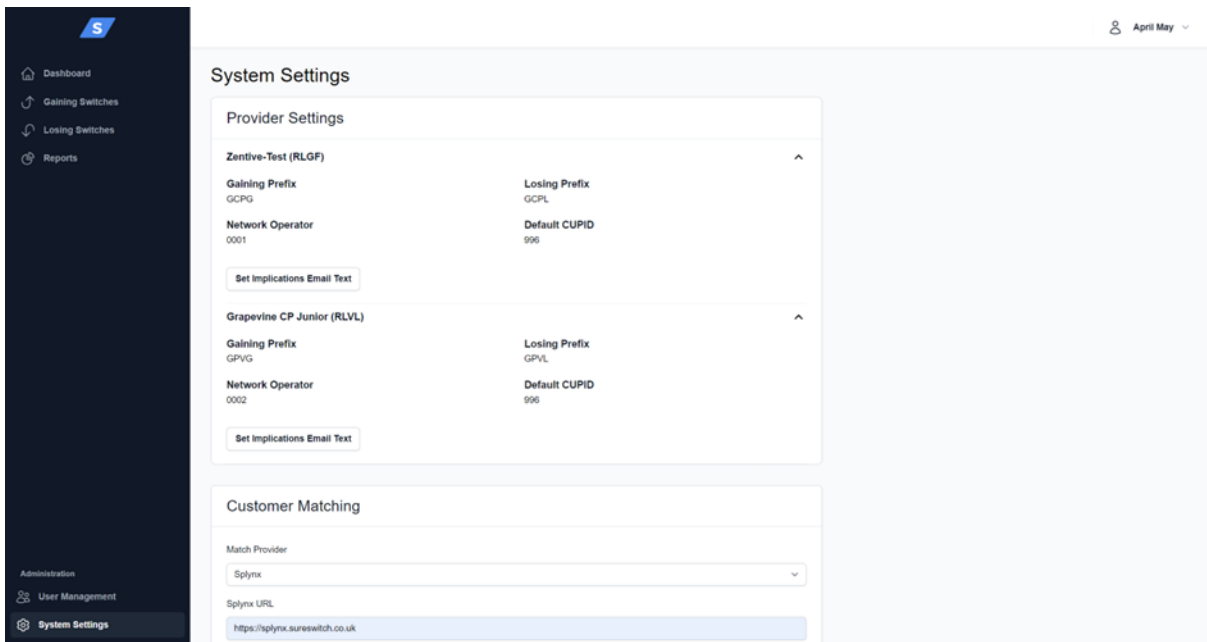

Provider Settings

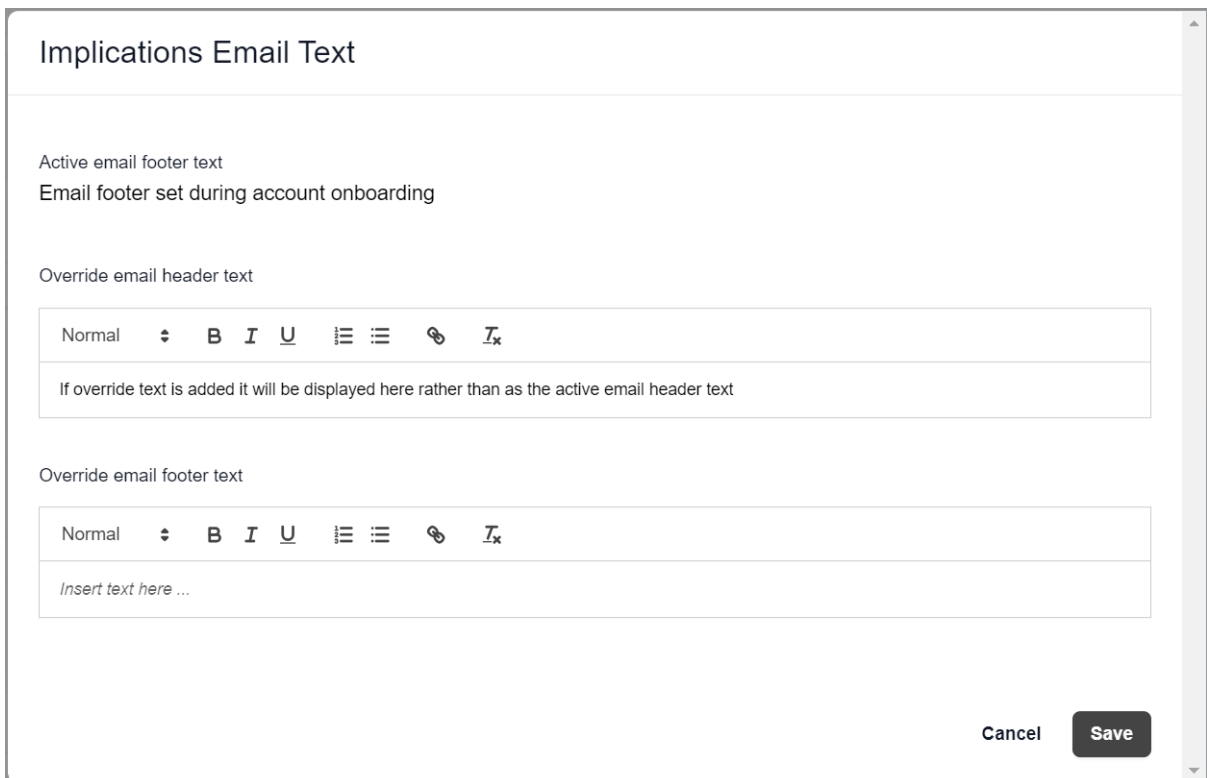

The Provider Settings show the RCPID allocated by a Company's registration with the TOTSCo Hub, account name and prefixes for gaining and losing switch cases. The prefixes form part of an auto generated identifier for each gaining and losing switch case to enter the portal. If an account has multiple registered brands, then these details will be displayed when the expand arrow is selected.

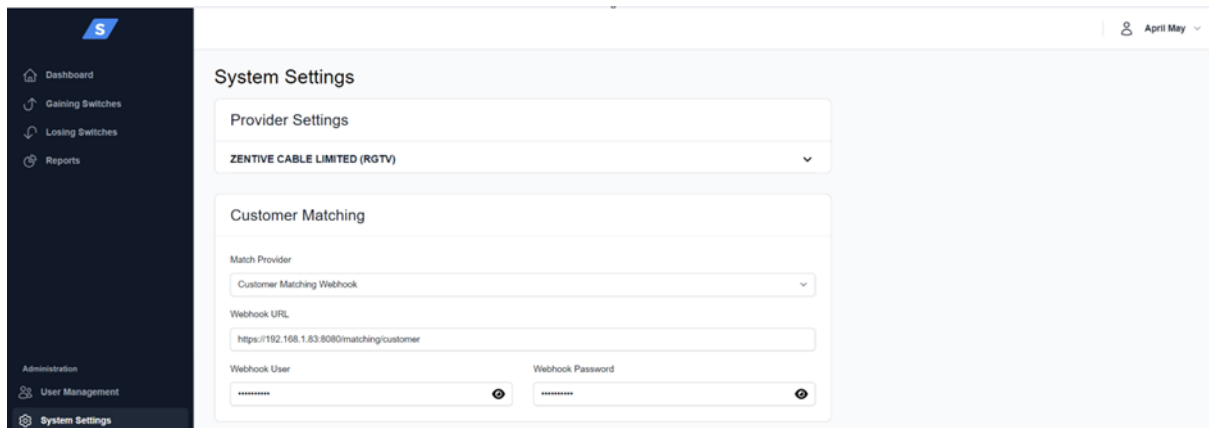

When the Match Provider in Customer Matching is selected as Splynx, it will be possible to customise the header and footer text that is included in the switching implications email. The header and footer can be specific to each account brand.

The Set Implications Email Text button will only be displayed when Splynx is saved as the match provider. Clicking Set Implications Email Text displays the text that is currently being displayed in the implications email, this value could be the default text e.g. Here is your switching information as of today, or it could be the text held at account level, e.g. Please return your equipment within 14 days of your switch date. Either or both the header and footer text can be overwritten by setting new text in the Override text fields and clicking Save.

Customer Matching

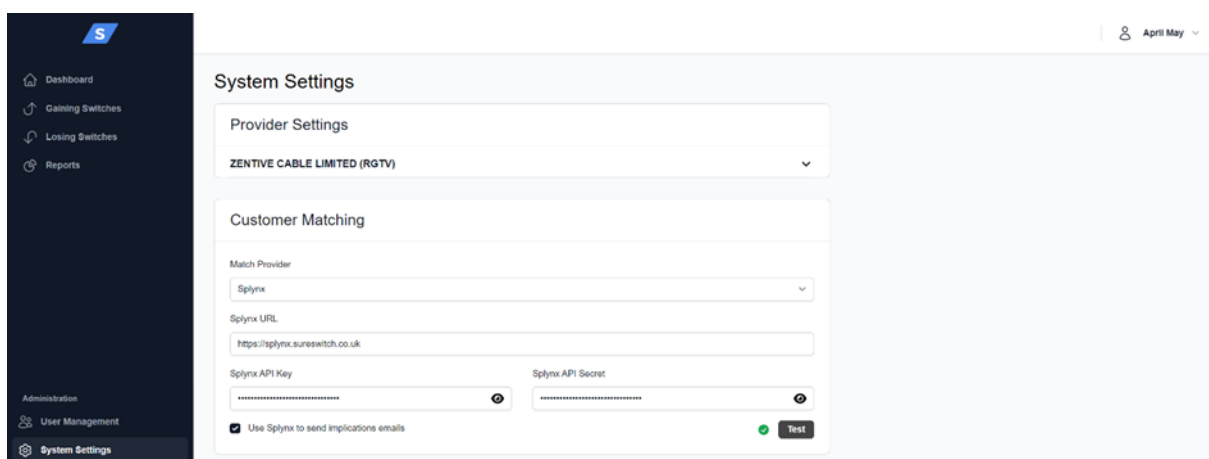

The screenshot shows the 'System Settings' page in a web application. The left sidebar contains navigation links: Dashboard, Gaining Switches, Losing Switches, Reports, Administration, User Management, and System Settings (highlighted). The main content area is titled 'System Settings' and includes a 'Provider Settings' section with a dropdown menu set to 'ZENTIVE CABLE LIMITED (RGTV)'. Below this is the 'Customer Matching' section, which contains the following fields:

- Match Provider: Customer Matching Webhook
- Webhook URL: https://192.168.1.83:8080/matching/customer
- Webhook User: [Redacted]
- Webhook Password: [Redacted]

The Customer Matching settings show the match provider, url, user and password required to connect your BSS to the SureSwitch Switching Engine. These settings can be edited, should your Match Provider change.

Whether the Match Provider is set as Splynx or CUSTOMER_WEBHOOK it is possible to test the connection by clicking the Test button. This will make a test call into your Splynx instance or webhook using these settings and will return a success or failure message. For CUSTOMER_WEBHOOK, you will additionally need to implement a GET method returning HTTP status 204 with no content.

If Splynx is selected as the Match Provider you have the option to use Splynx to send the implications emails, if the checkbox is unselected, the emails will be sent from SureSwitch.

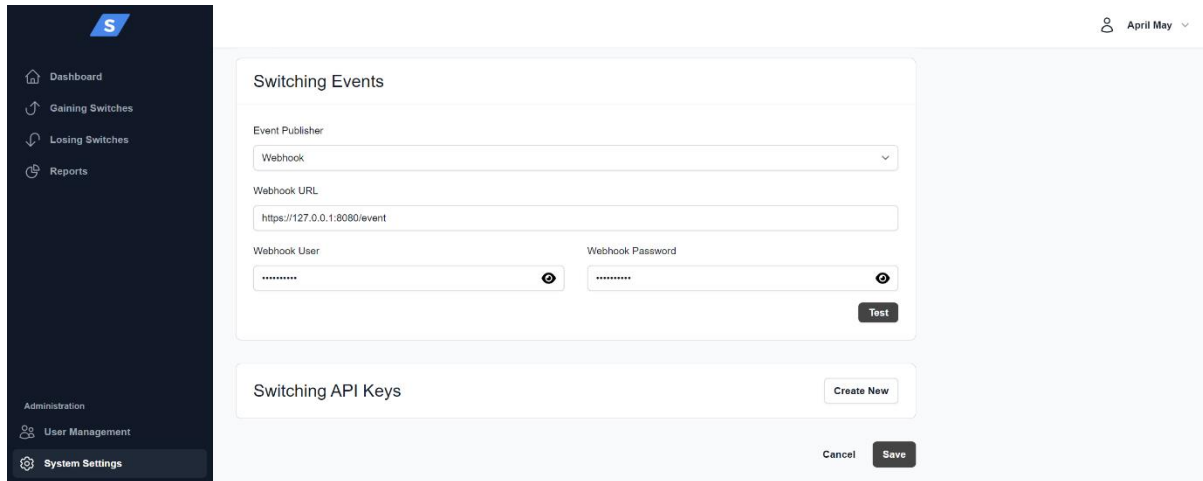

The screenshot shows the 'System Settings' page in a web application. The left sidebar contains navigation links: Dashboard, Gaining Switches, Losing Switches, Reports, Administration, User Management, and System Settings (highlighted). The main content area is titled 'System Settings' and includes a 'Provider Settings' section with a dropdown menu set to 'ZENTIVE CABLE LIMITED (RGTV)'. Below this is the 'Customer Matching' section, which contains the following fields:

- Match Provider: Splynx
- Splynx URL: https://splynx.sureswitch.co.uk
- Splynx API Key: [Redacted]
- Splynx API Secret: [Redacted]
- Use Splynx to send implications emails
- Test button (green)

Switching Events

Switching Events settings are required to enable SureSwitch to communicate with the TOTSCo Hub to process your gaining switch cases.

The screenshot shows the 'Switching Events' configuration page. On the left is a dark sidebar with navigation options: Dashboard, Gaining Switches, Losing Switches, Reports, Administration, User Management, and System Settings. The main content area has a header 'Switching Events' and a user profile 'April May'. Below the header are several input fields: 'Event Publisher' (a dropdown menu set to 'Webhook'), 'Webhook URL' (a text box containing 'https://127.0.0.1:8080/event'), 'Webhook User' (a text box with masked characters and an eye icon), and 'Webhook Password' (a text box with masked characters and an eye icon). A 'Test' button is located to the right of the password field. Below these fields is a 'Switching API Keys' section with a 'Create New' button. At the bottom right of the main area are 'Cancel' and 'Save' buttons.

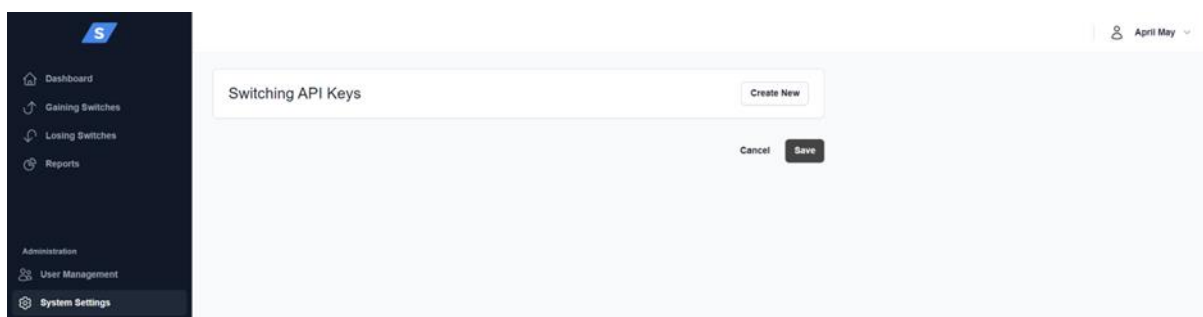

The Switching Events section shows the Event Publisher, webhook url, user and password for connecting the SureSwitch Switching Engine to your Customer BSS.

It is possible to test the connection by clicking the Test button. This will make a test call into your Splynx instance or webhook using these settings and will return a success or failure message. For WEBHOOK, you will additionally need to implement a GET method returning HTTP status 204 with no content.

Switching API Keys

Switching API Key settings are required to call the SureSwitch Switching APIs directly, integrating the switching process into your existing systems and sales journey.

To create a Switching API Key click the Create New button.

The screenshot shows the 'Switching API Keys' configuration page. It features the same sidebar as the previous screenshot. The main content area has a header 'Switching API Keys' and a user profile 'April May'. Below the header is a 'Create New' button. At the bottom right of the main area are 'Cancel' and 'Save' buttons.

Enter a name for the key and click Add Key.

API Key Name *

TippyTelecomms

Cancel Add Key

The API Key is created and stored. Please note that the API Secret can only be viewed here, now and will not be accessible again.

API Key Created

Copy and store the API key and secret in a secure location.

**For security reasons, we cannot show the secret to you again.
If you lose it, you will need to create a new API key.**

API Key

817d1477fe3a4a09a13a6ed73aaa6612

API Secret

f6754d179d64417cbe04094db98d08d81838d8685ae145cdb5a00909c7794374

Close

In the event you lose the Secret or the Key is no longer needed it can be deleted by selecting the Delete button.
